

Patient & Internal Challenges

Observable Issue	Who Is Affected	Hidden Risk	Internal Process Gap
Patient misses first post-discharge appointment	Patient, Case Manager, Outpatient Team	Early relapse undetected, disengagement	No automated scheduling confirmation or ownership before discharge
Crisis contact not relayed to case manager	Patient, Case Manager	Delayed intervention, escalation to emergency	Crisis systems not integrated with care coordination workflows
Gradual medication non-adherence	Patient, Provider	Condition worsens silently, crisis risk	No pharmacy data integration or adherence monitoring
Caregiver disengagement unnoticed	Patient, Caregiver	Loss of early warning system, delayed response	No caregiver tracking or engagement metrics
Care plan not updated after life changes	Patient, Case Manager	Treatment becomes irrelevant or ineffective	No event-triggered care plan update process
Premature discharge due to payer decision	Patient, Case Manager	Readmission, incomplete stabilization	Financial incentives override clinical decision-making
Missed follow-up on referral	Patient, Specialist, Case Manager	Delayed care, worsening condition	No closed-loop referral tracking system
Information lost between providers	Patient, Providers	Incomplete care decisions, repeated errors	Manual communication between disconnected systems
