

Role-specific dashboard view comparison for psychiatric continuity dashboard, showing which sections and actions are visible or hidden for case manager, consultant, and administrator roles.

Design principle applied: If the user cannot take the action, they should not see the instruction. Each role sees only the information they can act on, drawn from the same underlying workflow logic and data.			
Visible & actionable	Visible, read-only	Hidden from this role	Never displayed
Case manager Primary coordination role. Manages outreach, documentation, escalation initiation, and DP decisions for their own caseload. Own caseload only CRITICAL ALERTS PANEL Own patients — full alert detail, breach duration, required action Acknowledge alerts and select response action Overflow bar — view count transferred to CM Lead Other case managers' patient alerts Redistribute alerts to colleagues ACTIVE OUTREACH WINDOW TRACKER All own patients — risk tier, deadline, time remaining, contact status, status indicator Log outreach attempts inline Confirm risk tier from this view Other case managers' patient rows MISSED APPOINTMENT RESPONSE TRACKER Pipeline view for own patients — enter DP6 triage, log resolution, close DP7 Select logistics barrier or clinical concern at DP6 Initiate reschedule or flag for crisis pathway Activate crisis response directly — prompt only; escalation routes to consultant DOCUMENTATION COMPLETENESS PROMPTS	Consultant Clinical authority. Receives escalation notifications for high-risk and crisis cases. Reviews clinical concern flags. Does not manage outreach or documentation workflows. Escalated & clinical concern cases CRITICAL ALERTS PANEL Escalated and critical cases referred to them — read-only alert summary, no action buttons Confirm receipt of escalation notification — timestamp recorded Log clinical response decision for crisis pathway cases Standard pathway outreach alerts — not clinical concern Acknowledge or dismiss alerts on behalf of case manager Overflow bar or redistribution controls ACTIVE OUTREACH WINDOW TRACKER Elevated-risk patients only — risk tier, status indicator, deadline — read-only Standard pathway patients — not clinically relevant to this role Log outreach attempts — not consultant responsibility Confirm or update risk tier — care record action MISSED APPOINTMENT RESPONSE TRACKER Cases where DP6 identified clinical concern — pipeline status visible Log clinical concern response — risk reassessment outcome, crisis intervention decision Authorise welfare check where clinical policy indicates	Administrator Operational oversight. Monitors compliance, documentation integrity, caseload patterns, and workflow performance across the full team. Does not manage individual patient cases. Aggregate & team-level only CRITICAL ALERTS PANEL Aggregate alert counts by category — critical, escalated, outreach pending — across full team Breach duration trends — how long alerts persist before resolution Individual patient alert detail — identifiable patient data Acknowledge, action, or dismiss any alert Overflow bar controls — CM Lead function ACTIVE OUTREACH WINDOW TRACKER Aggregate view — total patients in window, total breached, split by risk tier Outreach timeliness rate over time — metric 2 trend data Individual patient rows — no identifiable patient detail Log contact attempts or confirm risk tier MISSED APPOINTMENT RESPONSE TRACKER Aggregate — total missed appointments, same-day review rate, DP6 triage classification breakdown Resolution pathway completion rate — metric 5 trend Individual pipeline view — identifiable patient data Enter DP6 decision, close DP7, initiate reschedule or crisis pathway DOCUMENTATION COMPLETENESS PROMPTS	

All open documentation fields for own patients — complete inline	DP6 logistics pathway — reschedule, reinforce continuity plan	Team-level completeness scores by case manager and by field type — metric 8 aggregate
Retrospective entry for unrecorded actions	Enter DP6 triage decision — case manager responsibility	Most frequently incomplete field types — DP6, DP4, structured outreach records
Other case managers' documentation gaps	Close DP7 resolution field — case manager action	Pre-discharge confirmation rate trend — metric 1
Team-level documentation completeness scores	DOCUMENTATION COMPLETENESS PROMPTS	Individual patient documentation prompts — case manager action only
CASELOAD LOAD & ESCALATION VISIBILITY	Escalation confirmation fields only — did case manager log consultant notification?	Complete or submit any documentation field
Own caseload summary — totals by status, doc completeness score	Confirm receipt of escalation notification — closes DP4 confirmation loop	CASELOAD LOAD & ESCALATION VISIBILITY
Team bar — own row only, read-only — no peer data visible	Outreach attempt records, DP6 triage entry, DP7 resolution — not consultant fields	Full team bar chart — all CMs, caseload size, alert counts, doc completeness
Individual colleague caseload counts or alert tallies	Retrospective outreach entry — case manager responsibility	Flag case managers at or above capacity threshold
Redistribution controls	Risk tier confirmation prompt — not consultant authority	Export caseload and metric summary reports
OWNERSHIP & HANDOFF VISIBILITY	CASELOAD LOAD & ESCALATION VISIBILITY	Metric trend data — all 8 Stage 1 metrics over time
Own patients — confirm ownership, flag mismatch	Cross-caseload view of critical and escalated cases only — how many, which CMs hold them	Redistribute individual patient alerts — CM Lead function
Reconfirm ownership where 48-hr prompt fires	Full caseload summary metrics — stable, monitoring, standard pathway counts	Action any individual case — no direct case management authority
Reassign patients to other case managers	Team bar chart — caseload management is CM Lead responsibility	OWNERSHIP & HANDOFF VISIBILITY
View or action other CMs' ownership flags	Documentation completeness scores — administrative view	Aggregate ownership gap rate — metric 6 trend, mismatch frequency
	OWNERSHIP & HANDOFF VISIBILITY	Unconfirmed ownership count across team at any point in time
	Entire section hidden — ownership assignment is coordination layer, not clinical authority	Individual patient ownership records — identifiable data
	Mismatch flags, reconfirmation prompts, reassignment controls	Confirm, reassign, or flag individual ownership — coordination layer actions

Cross-role note: The CM Lead role (S. Patel in the prototype) combines case manager authority over their own caseload with supervisory access to the full team view — equivalent to case manager + administrator views merged, plus redistribution controls. This role was not specified for this comparison but is implicit in the overflow and team-bar logic established in Stage 2.
