

Mapping Dashboard Responses to User Roles				
	Dashboard Action	Intended Role	Is it shown to the right role?	What needs to change?
1	Critical Alerts Panel	Case Manager	Yes	No changes needed. Alerts are actionable and tied to coordination responsibilities.
2	Active Outreach Window Tracker	Case Manager	Yes	No changes needed. Outreach is a case manager responsibility.
3	Missed Appointment Response Tracker	Case Manager	Yes	No changes needed. Supports DP5-DP7 workflow actions.
4	Escalated Clinical Concern Cases	Consultant	Partially	Show only escalated and clinical concern cases. Hide outreach and documentation workflows.
5	Caseload Load & Escalation Visibility	Administrator	Partially	Administrator should see aggregate trends, documentation compliance rates, and capacity metrics rather than identifiable patient-level details.
6	Ownership & Handoff Visibility	Case Manager	Yes	No changes needed. Ownership confirmation is part of coordination workflow.
7	Documentation Completeness Prompts	Case Manager	Yes	Hide direct documentation actions from consultants and administrators.
8	Team Capacity Redistribution	CM Lead / Administrator	Partially	The redistribution logic already surfaced naturally through the CM Lead overflow queue. The functionality exists. The role just hasn't been formally defined.
9	Consultant Access to coordination workflows	Consultant	No	Remove outreach logging, DP6 entry, ownership confirmation, and documentation actions. Consultant should only see escalation-related cases requiring clinical judgement.
